National Seminar Series on Integrated Site Remediation Features Industry Experts

REGENESIS integrates multiple aspects of site remediation and vapor intrusion at over 30 venues across the U.S.

SAN CLEMENTE, CA, February 17, 2011 — REGENESIS, a leading innovator of advanced, cost-effective groundwater and soil remediation technologies, announces a new series of half-day technology transfer seminars titled “Integrated Site Remediation.” These seminars, specific to the environmental remediation industry, are focused on practical strategies for assessing and mitigating vapor intrusion risks as well as for cleaning up contaminated soil and groundwater. The seminars will be offered at more than 30 venues across the U.S. Dates, locations and times are listed at the [REGENESIS website](http://www.regenesis.com).

“These are not the product-pitch type of presentations that are commonplace in our industry,” said Bryan W. Vigue, REGENESIS Vice President, Marketing. “Our goal is to provide an objective, comprehensive and well-balanced seminar with a breadth of information that remediation, vapor intrusion and other environmental professionals will find practical and useful in their daily work.” The new “Integrated Site Remediation” series includes formal presentations by industry experts, leading environmental engineering consultants, regulatory agency professionals and senior technical staff from REGENESIS and its Land Science Technologies division.

The list of featured guest speakers to date includes Dr. Blayne Hartman of Hartman Environmental Geosciences; Gavin Armstrong of the Ohio EPA; David Fleming of Thermal Remediation Solutions; Rick McGregor of Vertex Environmental; Steve Figgins of Kennedy/Jenks Consultants; and Matt Burns of WSP Environment & Energy.

New REGENESIS Seminars Will Feature Leading Experts in Integrated Site Remediation, p. 2

REGENESIS' "Integrated Site Remediation" seminar is free of charge to all federal, state and local government employees; a nominal \$25 fee for other attendees covers an on-site lunch, parking and all presentation materials. Continuing Education Units (CEUs) are available for seminars in certain areas where they have met the criteria for various professional groups and organizations.

The seminars have been or will be held at locations across the country in the following states: California, Texas, Colorado, Missouri, Florida, New York, New Jersey, Illinois, Ohio, Massachusetts, North Carolina, Indiana, Washington, DC, Michigan, Georgia, Washington and Oregon. For a complete listing, see www.regenesis.com/regenesis-resource-center/seminars/default.aspx.

San Clemente, CA-based REGENESIS has been a recognized leader in the environmental remediation industry since 1994, with proven, innovative environmental technologies that significantly reduce the cost, time and difficulty of restoring contaminated soil and groundwater. REGENESIS products have been applied on approximately 17,000 soil and groundwater cleanup projects worldwide by a range of leading environmental consulting firms. In the last several years, REGENESIS has expanded its capabilities by moving into the vapor intrusion mitigation market through a new division called Land Science Technologies. For more information visit the REGENESIS website at www.regenesis.com or the Land Science Technologies website at www.landsciencetech.com. Alternatively, you can contact Bryan Vigue, Vice President of Marketing at bvigue@regenesis.com or 949-366-8000, x122.
