## **REGENESIS Remediation Technologies Welcomes Italian Team to European Division**

SAN CLEMENTE, CALIFORNIA, September 30, 2011 — REGENESIS, the global leader in advanced technologies for contaminated site remediation, announced today the hire of a dedicated soil and groundwater remediation solutions sales team in Italy. The new team is comprised of Marcello Carboni, who will serve as Mediterranean District Manager, and Dr. Alberto Leombruni, who will function as a key technical resource for the region.

Marcello Carboni holds a degree in Environmental Engineering from Politecnico di Torino and was previously the Business Development Manager for the contaminated site remediation group of TRS Servizi Ambiente, which provided consulting, project management and fieldwork services. Over the past ten years, Mr. Carboni has designed and conducted numerous site investigations, laboratory and field test programs, treatability studies and full-scale applications of bioremediation and in situ chemical oxidation and reduction (ISCO and ISCR) technologies, in addition to conventional in situ extractive technologies such as pump-and-treat, air sparging, bioventing and soil vapor extraction.

Dr. Alberto Leombruni graduated in Environmental Engineering from the University of Perugia and earned his Ph.D. in a joint program administered by the Politecnico di Milano and the Massachusetts Institute of Technology (MIT) in the USA. In July 2010, Dr. Leombruni joined Regenesisc as an intern, providing local Italian support to environmental engineering firms for the successful implementation of in situ remediation programs involving REGENESIS' technologies.

## **REGENESIS Remediation Technologies Welcomes Italian Team to European Division, page 2**

“By expanding the European division of REGENESIS, Mr. Marcello Carboni and Dr. Alberto Leombruni will provide essential remediation support for the Mediterranean region,” said Dr. Jeremy Birnstingl, Managing Director for REGENESIS Ltd. “Their backgrounds, expertise and technical understanding of groundwater and soil remediation align extremely well with the REGENESIS mission to provide and support our suite of innovative technologies. We are excited to have them as part of the growing REGENESIS team, and look forward to their success”.

Within REGENESIS, Marcello Carboni and Dr. Leombruni complement a strong European team in the UK, Ireland, Belgium and Italy. They will provide technical support and application advice for the existing REGENESIS product line and assistance in the market introduction of new in situ remediation products shortly to be released by REGENESIS.

### **About REGENESIS**

San Clemente, California-based REGENESIS has been a recognized leader in the environmental industry since 1994, developing and marketing proven, innovative environmental technologies that significantly reduce the cost, time and difficulty of restoring contaminated soil and groundwater. REGENESIS products have been used by leading environmental consulting firms on approximately 17,000 soil and groundwater cleanup projects worldwide and across the U.S. For more information visit the REGENESIS website at [www.regenesis.com](http://www.regenesis.com) or contact Bryan Vigue, Vice President of Marketing, at [bvigue@regenesi.com](mailto:bvigue@regenesi.com) or 949-366-8000, x122.
